## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Drawings***

The drawings are objected to because black boxes 2,4,30,22,2',29',29,23 in Figures 1 and 2, should be labeled in accordance with their function. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anders (4,332,541) in view of EP (492,425). Anders teaches the claimed subject matter including pressure sensing to determine filter change, see column 3 line 49. Determination is made to change the filter, and not to control the process variables of the melt, as claimed. EP is applied for teaching that process parameters such as the extrusion speed can be changed in accordance with sensed temperature and pressure in the system, and use of the same leads to enhanced production. In view of this teaching it would have been obvious to modify the Anders system with extrusion parameter control such as speed of the melt, in accordance with the pressure change, to further enhance the melt process such as production. Use of a controllable valve as per claim 3 is a matter of choice, in lieu of the speed change, well within the level of ordinary skill in the art. As per claim 6 the operator would find it inherent that the monitoring set forth would lead to quality management, as claimed.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wildman et al, Nilsson and Moylan are cited for disclosing extrusion systems of interest to the instant invention.
